weatherproof color panels

## FULL COLOR

 **5LED** FULL COLOR SPECTRUM

# full color

enhance your creative possibilities

The combination of 5 LEDs (R+G+B+W+CW) extends the color possibilities over traditional RGBW technology, producing a much wider color gamut, a more natural white light, and richer colors.

EVO control technology allows you to set the base white light color temperature and then separately overlay the desired gel light color. This higher degree of color and light control keeps you focused on the creative, not technical aspects of lighting with color.

## color modes

**CCT**

Basic White mode: adjust the dimmer, Kelvin (2500K- 10000K) and green / magenta

**HSI+**

Full color: set a Kelvin value as a base white light, then add a layer of colored light on top, with Hue, Saturation, and Intensity adjustments

**RGB+**

Advanced color: adjust individually any of the EVO's 5 LED channels: Red, Green, Blue, White, and Cool White.

**GELS**

Select from a variety of traditional color gel formulas supplied by VELVET, or create, save, import or export your own gel looks

**EFFECT**

Choose from a large catalog: Television, Strobe, Pulse, Disc, Police and Fire, all adjustable for speed, frequency, flicker speed, smoothness and color...

## EVOlution outside, tech inside

Get everything you deserve from a professional color light: reliability, industry-leading output-to-weight and lumen/watt ratios, full output from standard 14.4V batteries, wireless control, silent fan-free operation, and a weatherproof IP54\* housing with a full gamut of in and out connections.

Every detail has been refined to be kind to its operator. From the rounded side panels and yoke to the comfortable handles and the color display, this was a light that was made to be used.

# total control

EVO can be controlled in any possible way, locally or wirelessly

All EVO fixtures are RDM enabled for fast channel assignment and addressing workflow with wireless DMX from LumenRadio.

With the DMX master/slave function, start with one fixture and link several fixtures through DMX and operate them all in unison without a console!

- On-board color display and shock proof buttons
- Wireless DMX-RDM LumenRadio
- ArtNet through Ethernet connector (only Studio models)
- Wi-Fi + VELVET Goya app from a smartphone or tablet
- DMX-RDM through XLR-5 connector

## VELVET Goya app

Using the VELVET Goya app on any IOS or Android smart device gives you instant full control over any EVO panel. You can create, save, load or share your own gels or user profiles, and use the app's color-picker to recreate colors from a photo or image. Your creative possibilities are unlimited.

The quick, precise and shareable app takes control and color adjustment of the EVO panel to a new level. The HSI advanced mode even includes an intuitive and user-friendly 360° color sphere interface.

Settings made in one mode can be fine-tuned in any other mode.

# made to last

superior softness, saturation and output

EVO's ultra-white inner reflector focuses the light from each LED onto the front diffuser, and the result is a super-soft, uniform and natural light at any white light or color setting. VELVET's softness is now EVO super-soft, with a beautiful wraparound light quality the moment you turn it on.

VELVET lights are a versatile foundation for any location or studio lighting package. Slim but rugged, soft but powerful, VELVET lights can be operated by batteries or any standard AC power worldwide. VELVET panels are designed to be instantly adjusted to work naturally with any ambient light.

## ready to work

EVO has been developed by and for professionals. Choose the ergonomic yoke with one-hand locking tilt lever. Two large side handles are easy to grab, even with rigging gloves on, and multiple sliding 1/4 - 20" rigging points are located on the top and bottom of every VELVET panel.

Now reconfiguring the light from shot to shot is easy.

## silent power efficiency

adjust it remotely on the fly in any studio or at any location

VELVET EVO leads the industry in electronic and optic efficiency. This has real on-set advantages, and a whole cascade of benefits:

- More running time with standard V-lock or Gold Mount batteries
- 100% fan-free and silent operation
- 1300 Lux at 3m from only 200W (EVO 2)
- 120 footcandles at 10 feet from only 1.8 Amps at 110 VAC (EVO 2)
- 100% full output even with 14.4V batteries

The image shows the control panel of a VELVET EVO light fixture. It features a power button at the top, a large 'V' logo with 'VELVET' underneath, and several function buttons: 'ENTER' with a plus sign, a minus sign, and a '32K' indicator; a '56K' indicator; a 'BACK' button; and a 'MODE' button with a gear icon. The panel is set against a background of colorful geometric shapes (orange, purple, green) and text overlays.
