

## Changes

### ● Effects mode

9 Effects with multiple customizable parameters to be able to adjust the selected effect to what is required in each shot.

DEF button to be able to return to the Default values of each Effect created

PRESET button to be able to save and load each custom Effect created

New DMX map with Effects Mode included

Download the new DMX Map at: [www.velvetlight.tv/support/velvet-kosmos-series/](http://www.velvetlight.tv/support/velvet-kosmos-series/)

### ● DMX Master dynamic

configuring the Slave/slaves devices in 8-bit Changing Mode, the Mode selected in the Master equipment will also be reproduced in the Slaves

### ● LUMENRADIO as DMX Master

When receiving wireless DMX through LumenRadio, the fixture automatically behaves as a DMX Master passing its parameters through the DMX cable. This can also be canceled by reverting the device to Slave.

### ● Modifications when connected to DMX and doesn't receive signal DMX

When the equipment is connected to DMX and the signal is lost:

Last command: The unit keeps the last DMX commands received. The DMX reference on the screen does not disappear, but now on the upper left side there is a message: NO DMX

Go to local: The equipment goes to the last parameters entered manually via Local and the DMX screen of the equipment disappears.
